Index: Volume 4 1994

Subject index

angular position
  dual task, torque, EMG, elbow, 195
bibliometry
  history, clinical electromyography and kinesiological electromyography, 5
bifunctional muscle
  stretch reflex, H-reflex, reciprocal inhibition, 95
clinical electromyography and kinesiological electromyography
  history, bibliometry, 5
control
  reaching, synergy, tetraplegic, 242
cross-correlation
  surface electromyography, electrophysiological, simulation, 15
cut-off frequencies
  gait, EMG, envelope, power spectrum, 105
dual task
  torque, EMG, elbow, angular position, 195
dynamic contraction
  electromyogram, muscle fatigue, static contraction, power spectrum analysis, work, 170
elbow
  dual task, torque, EMG, angular position, 195
  synergy, EMG, task, 143
electrical stimulation
  EMG, muscle, evoked potentials, volume conduction, fat, 131
electromyogram
  equilibrium-point hypothesis, joint compliance, voluntary movement, movement kinematics, 230
  muscle fatigue, static contraction, dynamic contraction, power spectrum analysis, work, 170
electromyography (EMG)
  motor control, isometric muscle action, pectoralis major, 161
  osteoarthrosis, knee joint, quadriceps muscle, 153
  reliability, normalization, reproducibility, 47
electrophysiological
  surface electromyography, simulation, cross-correlation, 15
EMG
  dual task, torque, elbow, angular position, 195
  gait, envelope, power spectrum, cut-off frequencies, 105
  muscle, electrical stimulation, evoked potentials, volume conduction, fat, 131
  synergy, task, elbow, 143
energy cost
  muscular dystrophy, gait, muscle activity, movement patterns, 67
envelope
  gait, EMG, power spectrum, cut-off frequencies, 105
equilibrium-point hypothesis
  electromyogram, joint compliance, voluntary movement, movement kinematics, 230
evoked potentials
  EMG, muscle, electrical stimulation, volume conduction, fat, 131
fat
  EMG, muscle, electrical stimulation, evoked potentials, volume conduction, 131
fibre labelling
  single fibre electromyography, wire electrodes, multi-electrode, rat muscle, 37
fibre type content
  repetitive cutaneous stimulation, humans, 116
gait
  EMG, envelope, power spectrum, cut-off frequencies, 105
  muscular dystrophy, muscle activity, movement patterns, energy cost, 67
gait analysis
  modelling, signal processing, surface EMG, 83
H-reflex
  bifunctional muscle, stretch reflex, reciprocal inhibition, 95
  premovement EMG silence, motor units, presynaptic inhibition, 27
history
  clinical electromyography and kinesiological electromyography, bibliometry, 5
human
  motor performance, muscle fatigue, recovery, 218
humans
  repetitive cutaneous stimulation, fibre type content, 116
isokinetics
  muscle strength, muscle activation, meniscal lesion, 205
isometric muscle action
  motor control, electromyography, pectoralis major, 161
joint angles
  knee joint, knee instability, joint displacement, 181
joint compliance
  electromyogram, equilibrium-point hypothesis, voluntary movement, movement kinematics, 230
joint displacement
  knee joint, knee instability, joint angles, 181
knee instability
  knee joint, joint displacement, joint angles, 181
  osteoarthrosis, quadriceps muscle, electromyography, 153
knee joint
  knee instability, joint displacement, joint angles, 181
  meniscal lesion
  muscle strength, muscle activation, isokinetics, 205
modelling
  gait analysis, signal processing, surface EMG, 83
motor control
  electromyography, isometric muscle action, pectoralis major, 161
motor performance
  human, muscle fatigue, recovery, 218
motor units
  premovement EMG silence, H-reflex, presynaptic inhibition, 27
movement kinematics
  electromyogram, equilibrium-point hypothesis, joint compliance, voluntary movement, 230
movement patterns
  muscular dystrophy, gait, muscle activity, energy cost, 67
multi-electrode
  single fibre electromyography, wire electrodes, rat muscle, fibre labelling, 37
muscle
  EMG, electrical stimulation, evoked potentials, volume conduction, fat, 131
muscle activation
  muscle strength, meniscal lesion, isokinetics, 205
muscle activity
  muscular dystrophy, gait, movement patterns, energy cost, 67
muscle fatigue
  electromyogram, static contraction, dynamic contraction, power spectrum analysis, work, 170
  motor performance, human, recovery, 218
muscle strength
  muscle activation, meniscal lesion, isokinetics, 205
muscular dystrophy
  gait, muscle activity, movement patterns, energy cost, 67
normalization
  electromyography (EMG), reliability, reproducibility, 47
osteoarthrosis
  knee joint, quadriceps muscle, electromyography, 153
pectoralis major
  motor control, electromyography, isometric muscle action, 161
power spectrum
  gait, EMG, envelope, cut-off frequencies, 105
power spectrum analysis
  electromyogram, muscle fatigue, static contraction, dynamic contraction, work, 170
premovement EMG silence
  motor units, H-reflex, presynaptic inhibition, 27
presynaptic inhibition
  premovement EMG silence, motor units, H-reflex, 27
quadriceps muscle
  osteoarthrosis, knee joint, electromyography, 153
rat muscle
  single fibre electromyography, wire electrodes, multi-electrode, fibre labelling, 37
reaching
  control, synergy, tetraplegic, 242
reciprocal inhibition
  bifunctional muscle, stretch reflex, H-reflex, 95
recovery
  motor performance, human, muscle fatigue, 218
reliability
  electromyography (EMG), normalization, reproducibility, 47
repetitive cutaneous stimulation
  fibre type content, humans, 116
reproducibility
  electromyography (EMG), reliability, normalization, 47
signal processing
  gait analysis, modelling, surface EMG, 83
simulation

dynamic contraction
  electromyogram, muscle fatigue, static contraction, power spectrum analysis, work, 170
elbow
  dual task, torque, EMG, angular position, 195
  synergy, EMG, task, 143
electrical stimulation
  EMG, muscle, evoked potentials, volume conduction, fat, 131
electromyogram
  equilibrium-point hypothesis, joint compliance, voluntary movement, movement kinematics, 230
  muscle fatigue, static contraction, dynamic contraction, power spectrum analysis, work, 170
electromyography (EMG)
  motor control, isometric muscle action, pectoralis major, 161
  osteoarthrosis, knee joint, quadriceps muscle, 153
  reliability, normalization, reproducibility, 47
electrophysiological
  surface electromyography, simulation, cross-correlation, 15
EMG
  dual task, torque, elbow, angular position, 195
  gait, envelope, power spectrum, cut-off frequencies, 105
  muscle, electrical stimulation, evoked potentials, volume conduction, fat, 131
  synergy, task, elbow, 143
energy cost
  muscular dystrophy, gait, muscle activity, movement patterns, 67
envelope
  gait, EMG, power spectrum, cut-off frequencies, 105
equilibrium-point hypothesis
  electromyogram, joint compliance, voluntary movement, movement kinematics, 230
evoked potentials
  EMG, muscle, electrical stimulation, volume conduction, fat, 131
fat
  EMG, muscle, electrical stimulation, evoked potentials, volume conduction, 131
fibre labelling
  single fibre electromyography, wire electrodes, multi-electrode, rat muscle, 37
fibre type content
  repetitive cutaneous stimulation, humans, 116
gait
  EMG, envelope, power spectrum, cut-off frequencies, 105
  muscular dystrophy, muscle activity, movement patterns, energy cost, 67
gait analysis
  modelling, signal processing, surface EMG, 83
H-reflex
  bifunctional muscle, stretch reflex, reciprocal inhibition, 95
  premovement EMG silence, motor units, presynaptic inhibition, 27
history
  clinical electromyography and kinesiological electromyography, bibliometry, 5
human
  motor performance, muscle fatigue, recovery, 218
humans
  repetitive cutaneous stimulation, fibre type content, 116
isokinetics
  muscle strength, muscle activation, meniscal lesion, 205
isometric muscle action
  motor control, electromyography, pectoralis major, 161
joint angles
  knee joint, knee instability, joint displacement, 181
joint compliance
  electromyogram, equilibrium-point hypothesis, voluntary movement, movement kinematics, 230
joint displacement
  knee joint, knee instability, joint angles, 181
knee instability
  knee joint, joint displacement, joint angles, 181
  osteoarthrosis, quadriceps muscle, electromyography, 153
knee joint
  knee instability, joint displacement, joint angles, 181
  meniscal lesion
  muscle strength, muscle activation, isokinetics, 205
modelling
  gait analysis, signal processing, surface EMG, 83
motor control
  electromyography, isometric muscle action, pectoralis major, 161
motor performance
  human, muscle fatigue, recovery, 218
motor units
  premovement EMG silence, H-reflex, presynaptic inhibition, 27
movement kinematics
  electromyogram, equilibrium-point hypothesis, joint compliance, voluntary movement, 230
movement patterns
  muscular dystrophy, gait, muscle activity, energy cost, 67
multi-electrode
  single fibre electromyography, wire electrodes, rat muscle, fibre labelling, 37
muscle
  EMG, electrical stimulation, evoked potentials, volume conduction, fat, 131
muscle activation
  muscle strength, meniscal lesion, isokinetics, 205
muscle activity
  muscular dystrophy, gait, movement patterns, energy cost, 67
muscle fatigue
  electromyogram, static contraction, dynamic contraction, power spectrum analysis, work, 170
  motor performance, human, recovery, 218
muscle strength
  muscle activation, meniscal lesion, isokinetics, 205
muscular dystrophy
  gait, muscle activity, movement patterns, energy cost, 67
normalization
  electromyography (EMG), reliability, reproducibility, 47
osteoarthrosis
  knee joint, quadriceps muscle, electromyography, 153
pectoralis major
  motor control, electromyography, isometric muscle action, 161
power spectrum
  gait, EMG, envelope, cut-off frequencies, 105
power spectrum analysis
  electromyogram, muscle fatigue, static contraction, dynamic contraction, work, 170
premovement EMG silence
  motor units, H-reflex, presynaptic inhibition, 27
presynaptic inhibition
  premovement EMG silence, motor units, H-reflex, 27
quadriceps muscle
  osteoarthrosis, knee joint, electromyography, 153
rat muscle
  single fibre electromyography, wire electrodes, multi-electrode, fibre labelling, 37
reaching
  control, synergy, tetraplegic, 242
reciprocal inhibition
  bifunctional muscle, stretch reflex, H-reflex, 95
recovery
  motor performance, human, muscle fatigue, 218
reliability
  electromyography (EMG), normalization, reproducibility, 47
repetitive cutaneous stimulation
  fibre type content, humans, 116
reproducibility
  electromyography (EMG), reliability, normalization, 47
signal processing
  gait analysis, modelling, surface EMG, 83
simulation

surface electromyography,
electrophysiological, cross-correlation, 15
single fibre electromyography
wire electrodes, multi-electrode, rat muscle, fibre labelling, 37
static contraction
electromyogram, muscle fatigue, dynamic contraction, power spectrum analysis, work, 170
stretch reflex
bifunctional muscle, H-reflex, reciprocal inhibition, 95
surface electromyography
electrophysiological, simulation, cross-correlation, 15
surface EMG
gait analysis, modelling, signal processing, 83
synergy
control, reaching, tetraplegic, 242
EMG, task, elbow, 143
task
synergy, EMG, elbow, 143
tetraplegic
control, reaching, synergy, 242
torque
dual task, EMG, elbow, angular position, 195
volume conduction
EMG, muscle, electrical stimulation, evoked potentials, fat, 131
voluntary movement
electromyogram, equilibrium-point hypothesis, joint compliance, movement kinematics, 230
work
electromyogram, muscle fatigue, static contraction, dynamic contraction, power spectrum analysis, 170
